

Your Data Can Make a Difference in National Drug Control Efforts

As a toxicology laboratory, you provide valuable information about the impacts that drugs and substance use have on public health.

By participating in NFLIS-Tox, your office will be contributing to an important national data collection that supports DEA drug scheduling and informs drug policy.

DEA may provide assistance for toxicology laboratory participation.

The NFLIS-Tox program strives to minimize burden to participating laboratories. The program works closely with information management systems and in-house data systems to assist with data extraction routines for core data items. On a case-by-case basis, computer hardware and software assistance may be provided for reporting needs.

As a NFLIS-Tox participant, you can influence a greater national understanding of the following:

Drug frequency trends

New drug trends

Toxicology testing practices

Receive assistance from DEA to easily extract approximately 10 NFLIS-Tox data items:

Information Management System Support

- Computer hardware and software
- Data entry support

Enable DEA to compile national drug trend data on the following:

- Case ID/unique identifier
- Requesting office type or agency
- Case type
- Requesting office/agency location
- Date of case submission
- Date of case completion
- Drug(s) and metabolite(s) confirmed

Contribute to national statistics and gain access to aggregated data.

Have any ideas to share with DEA regarding the NFLIS-TOX surveillance system?
